Oracle Maxymiser SE Problem Solving Exercises
Position: Technical Consultant

1. A **CSS selector** associates an HTML element or set of elements to a set of style declarations. These declarations live in a separate file called a CSS stylesheet, loaded at runtime by the browser prior to processing the HTML body. In an HTML document, they will appear exclusively in opening tags, so to find one on a page, simply right click on a given page and select **View Page Source**; an opening HTML tag will look like **<p>**, and a CSS selector will appear within it, like **<p class="main">**. If you know the selector you are looking for, do a quick ctrl-F to search for it. Note that a CSS selector will always appear on an element within the enclosing **<body></body>** tag.
2. See attached maxymiserTwo.js file
3. See attached maxymiserThree.js file
4. Amy is **4** years old. (Sue is 8 years old; in 4 years, Sue will be 12 and Amy will be 8.)
